# Letter of recommendation

July 8, 2026

**French Alternative Energies and Atomic Energy Commission**

We had Mohamed along in our team for a short internship of three months at the end of his apprenticeship. Mohamed had the mission to implement the beta version of an interactive dashboard to analyze complex results from parametric and modular Life Cycle Analysis calculations.

The internship had three stages:

1. Discovering and understanding of the problem
2. Designing the webapp, by drawing a mockup
3. Implementing it and conducting preliminary tests

Mohamed successfully completed the mission and the tasks expected. The first part was the most challenging, since the time constraint was high and did not granted Mohamed a lot of time to understand in depth the concepts behind Life Cycle Analysis calculations and their results. But we collaborated to define and design a mockup of the application. During this phase, Mohamed made sure that what we had in mind would be feasible. He also took initiative to fetch additional literature on the topic to comfort our choices. He made sure we defined precisely enough the requirements, and that we got enough feedbacks and approval from the future users. Once what we expected was clearly defined and formalized, he implemented it quickly and autonomously, and we could validate the dashboard with some first tests.

After some work and iterations, Mohamed was able to deliver a very nice and clear presentation of the work he had done, despite the complexity of the subject and the short time he had to comprehend it.

All along the internship, Mohamed has been serious in his work, paying attention to validate what had to be done beforehand, and by delivering on time. He made an excellent job delivering reports and presentations at the end of the internship despite the tight deadlines.

On a more personal note, it has been very pleasant to work with Mohamed. He got integrated into the team quickly. He felt responsible, and was curious about the work of our team. He has been eager to get feedbacks and willing to learn.

We thus recommend Mohamed for similar missions.

Best regards,
Victor Maneval
